Project Information

Name of The Organization

We do not have an organization, but the Name of the Project and our final Website will be BeerReview.

Project Timeframe

The Project is meant to be finished at the end of the school year

Prepared by

This Project is created from Niklas Grübl, Joachim Pelzeder and Dominik Soltysiak

Project Summary

Why are we doing this Project?

We needed a Project for school, and we decided to go with BeerReview since we all like to drink a beer every now and then.

What is this Project?

BeerReview is meant to be a Website with some form of User interaction.

What will we be doing?

We want to include all these different topics somewhere in our Website:

1. A Beerlist with a few Beers, "Radler" and non-alcoholic beers
2. Our Favorites which will rank all the beers based on a User Voting
3. A little description on how to brew beer
4. All the Team members with their Social Media links
5. A Contact us option where the Users can write us an E-Mail when they want us to add another beer to the list
6. A Profile System where you can create your own account. The accounts will be needed to take Part on the voting.
7. A Voting System which will update after some time where you can choose your favorite beer, which will then affect the Favorite Beer List (This only works if you are Logged in)

Project Methodology

The Project Approach Summary

We use Atom to write our html code, Discord to communicate with each other, GitHub to help us keep updated on what the other two have changed on the code. We decided as a group what every person is doing and try that everyone of us can use their strengths.

How we manage all the different Tasks

In the beginning we planned on using Trello to manage all the task and who is doing what. After some time, nobody really cared about our Trello Board and it was not up to date. We are currently using the Issues Section of our GitHub Project to sum up all the ideas we want to include in the future.

Conclusion

We did this Project since we do not know about any website where you can find a User based opinion on all the different beer types. With this website the Problem “What is the best Beer” or “Where can I find new ones I did not know about” will provide a decent solution. If this Project will ever find his way to the Internet, we plan on using the Google-Ads Service on the sides of our website to at least keep up with the costs of the website. We will not go for more money than the website being online costs.
